

The control and diagnostics facility is provided for single or multiple reception systems. The interface provides the following operator-friendly features:

1. A 6" colour touch screen HMI with fully animated display of the system tailored to your requirements. Larger touch screen panels are available on request.
2. Local and remote (SCADA) automatic operation capabilities via Ethernet connection.
3. A manual control mode to allow safe operator intervention for recovering from an upset condition from a blocked line due to out of tolerance material or air failure.
4. A complete alarm diagnostics page.
5. On screen trends for peak performance review
6. A record of system operating performance from a data logging facility.

For further details or options please contact the Macawber UK office.
